REGISTER OF RAINFALL IN 1897.

Kept at Lesketh How *in the County of* Westmorland *by* F. M. T. Jones – A. Sharp. Ambleside.

Latitude ....

Time of Observation 10 a.m.

Height of Receiver of Rain Gauge. Above Ground ....

Above Sea Level ....

Longitude ....

Condensed Instructions.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow and enter that as the yield of water—*e.g.*, 3 inches snow = ·25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Accurate observers of rainfall will oblige by sending a copy of their record to Mr. G. J. Symons, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from more than 1500 stations.

Additional Copies of this form (price 3d. each) can be obtained of the above, from Mr. Stanford, *55, Charing Cross, and from all the leading opticians.*

REGISTER OF RAINFALL IN 1891

Kept at High Close *in the County of* Westmorland *by* E H W Baker Esq

Latitude ……………

Longitude …………… as before

Time of Observation ……………

RAIN GAUGE

Diameter ……………

Height of Receiver above Ground ……………

" " " Sea Level ……………

CONDENSED INSTRUCTIONS.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow, and enter that as the yield of water—*e.g.*, 3 inches snow = ·25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Accurate observers of rainfall will oblige by sending a copy of their record to Mr. G. J. SYMONS, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from about 2000 stations.

Additional Copies of this form (price 3d. each) can be obtained of the above, from Mr. STANFORD, 55, *Charing Cross, and from all the leading opticians.*

REGISTER OF RAINFALL IN 1893

Kept at High Close *in the County of* Westmoreland *by* E. B. W. Balme Esqr.

Latitude .... Longhrigg

Time of Observation..................

Longitude........ Particulars as before

RAIN GAUGE

Diameter......................

Height of Receiver above Ground.........................

" " " Sea Level.........................

CONDENSED INSTRUCTIONS.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow, and enter that as the yield of water—*e.g.*, 3 inches snow = ·25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Accurate observers of rainfall will oblige by sending a copy of their record to Mr. G. J. SYMONS, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from about 2000 stations.

Additional Copies of this form (price 3d. each) can be obtained of the above, from Mr. STANFORD, *55, Charing Cross, and from all the leading opticians.*
